SUMMARY

Senior Test Engineering Lead with 4+ years of experience specializing in mobile testing strategy, automation, architecture and DevOps integration. Proven track record of delivering award-winning applications, including a 2025 Drum Awards Gold winner, and generating \$300k+ in cost avoidance through "shift-left" testing. Veteran leader (US Army) with a focus on high-velocity, zero-incident deployment cycles

TECHNOLOGY SUMMARY

Core Development: Android (Compose/Views), iOS (SwiftUI/UIKit), Kotlin, Swift, Python

Automation & Quality: Espresso, XCUITest, PyTest, Postman, Compose Test, Cypress

DevOps & Cloud: GitHub Actions, GitLab, AWS, Azure DevOps, Bitbucket, CI/CD Pipeline Architecture

WORK EXPERIENCE

Fintech Mobile App – Telus Digital (formerly WillowTree)

Senior Software Test Engineer | *January 2026 – Present*

- Orchestrated QA operations for a cross-functional team of four, managing testing lifecycles for both legacy and modernized fintech platforms.
- Pioneered accessibility testing process using native and third-party tools to achieve and maintain WCAG 2.2 AA standards across all mobile interfaces.
- Upskilled 3 test engineers in native mobile automation (Espresso & XCUITest) by architecting a custom iOS and Android training applications featuring tiered challenge levels

Quick Service Restaurant Mobile App – Telus Digital (formerly WillowTree)

Senior Software Test Engineer | *July 2023 – January 2026*

- Mitigated operational risk by overseeing 16 high-velocity feature deployments with zero technical incidents; prevented 15 critical production escapes, securing \$300,000 in savings based on standard cost-per-defect metrics.
- Developed the QA strategy for a national rapid-growth QSR platform that won Gold for Digital Experience at The Drum Awards 2025, recognized for industry-leading innovation and user engagement.
- Designed the refactor of Espresso suite using the Robot Pattern, improving test readability and maintainability while reducing test suite run times by nearly 70%.
- Led quality engineering initiatives for a comprehensive project involving native mobile applications and backend, integrating with nine distinct services to enable seamless authentication, loyalty programs, ordering, and marketing features.
- Collaborated with client's Customer Service to address trending app issues, provide FAQs and promote a partnership resolving over 11,000 issues at launch.

Brightline Trains Mobile App – WillowTree (now Telus Digital)

Platform Software Test Engineer | *July 2022 – July 2023*

- Engineered comprehensive manual and automated testing practice for a native mobile and corresponding backend for frontend, enabling core features like booking, loyalty, and payment contributing to the app's recognition with Gold and Silver Medals for Technology and Innovation from Vega Digital Awards.
- Designed and implemented robust UI test suites using the Page Object Model (POM) for Espresso and XCUITest, comprising over 100 tests, which enabled the team to skip regression cycles and enhance testing efficiency.
- Developed and implemented custom Espresso test classes to interact with Pager2 and RecyclerView items, significantly enhancing the scope and reliability of UI tests.

Fox Weather Mobile App – WillowTree (now Telus Digital)

Software Test Engineer | *February 2022 – June 2022*

- Coordinated with native engineering teams on quality initiatives for notifications, automation frameworks, and releases, ensuring cross-functional alignment and high-quality deliverables.
- Increased automation coverage for regression test cases from 20% to 54%, streamlining manual testing efforts and accelerating release cycles.
- Ensured high quality of release builds through rigorous testing, directly contributing to the app achieving the #1 position in both app stores and surpassing 100,000 downloads.

EDUCATION

University of Texas. San Antonio, TX
B.S. Degree in Computer Science
